At Intersolar / The smarter E Europe 2026, coneve presents two further-developed solutions: an expanded version of coneve Flex with new use cases for PV feed-in optimization and flexibility marketing, plus coneve Solar Spot, a manufacturer-independent direct-marketing product for PV plant operators. The offerings address three target groups with one shared problem: rising electricity and grid costs, limited grid connections, and revenue lost to curtailment. coneve turns existing flexibility – battery storage, PV systems and controllable loads – into economic value: batteries are deployed across multiple use cases in parallel and additionally marketed on the flexibility market, cutting energy costs by up to 35 percent. coneve can be found in Hall B0, is a partner of the special exhibit "Renewables 24/7" in Hall C5, and is a finalist for The smarter E AWARD 2026 in the Smart Integrated Energy category.
